

[Name of Document]                      ABSTRACT

[Abstract]

[Object] To provide a data output system which can control a printer in accordance with the position of a user without providing a mobile terminal and the printer with special devices, which can ~~lessen-reduce~~ the processing ~~burden-load~~ on the mobile terminal, which can ensure the convenience of the user when using the printer, and which avoids inconvenience as a result of incorrect settings by the user.

[Solving Means] A print control terminal 100 obtains mobile terminal position information from a relay station 220. When the distance between the mobile terminal position specified by the obtained mobile terminal position information and the printer position specified by printer position information from a storage device 42 is less than a predetermined value A, a print command and corresponding print data are transmitted to a printer PR in response to a request from a mobile terminal 200.
